Summary

I am a Web & Application Developer who brings a grounded, disciplined approach to every aspect of my work. I am known for being reliable, accountable, and someone who follows through. I take ownership of projects and systems end-to-end and thrive in environments where high standards, measurable outcomes, and real-world impact matter.

I adapt quickly, learn aggressively, and do not shy away from complex challenges. While my technical ability is strong, what sets me apart is my maturity, consistency, judgment, and problem-solving ability, along with a growing focus on identifying where technology, including AI, can meaningfully improve workflows, efficiency, and business outcomes. I am particularly interested in translating real-world operational needs into structured, practical solutions that deliver clear value.

I am comfortable working across both technical and business contexts, helping bridge the gap between requirements and implementation. I approach problems by asking the right questions, evaluating trade-offs, and focusing on solutions that are not only technically sound, but also realistic, scalable, and aligned with broader organizational goals.

TECHNICAL KNOWLEDGE

Languages: TypeScript, JavaScript (ES6+), C#, Python, PHP, SQL, HTML5, CSS3

Front End: React (Hooks, Functional Components), Next.js, React Router, Responsive & Mobile-First Design, Component-Based Architecture

Backend and APIs: Node.js, RESTful API Design & Integration, Serverless Functions, Authentication & Authorization

Databases and Data: PostgreSQL (Supabase), MySQL, Relational Schema Design, Row-Level Security (RLS), SQL Query Optimization

Cloud and DevOps: Vercel (Deployment & DNS), CI/CD Pipelines, Environment Variable Management, Domain Configuration

AI & Product Enablement: AI Use Case Identification & Prioritization, Business Case Development, AI/ML Fundamentals (LLMs, NLP Concepts), Prompt Design, Workflow Automation

Core Concepts: Full-Stack Architecture, State Management, Secure Auth Flows, API Caching Strategies, Performance Optimization, Object-Oriented Programming

Employment

Full-Stack Web & Application Developer

TaskNova | Automated Lead Capture System | 2025 - Present

Live: [TaskNova | AI Automation & Smart Websites for Small Businesses](#)

Code Review: <https://github.com/bellsandwhistlesdesigns/TaskNova>

Designed the entire stack

Modeled normalized relational database schemas and enforced Row-Level Security (RLS) for secure user data isolation

Implemented secure authentication flows, protected routes, and session persistence

Owned full infrastructure lifecycle including domain registration, DNS configuration, environment isolation, and CI/CD deployment pipelines

Optimized performance through API caching strategies, client-side state synchronization, and defensive fallback mechanisms

Delivered a mobile-first, responsive user experience with state-aware rendering logic

Maintain structured GitHub repository with documented technical decisions and clean version control practices

Tech Stack: Figma, TypeScript, Tailwind CSS, Next.js, React, Supabase, PostgreSQL, Vercel, OpenAI, and Resend

(Web Developer Portfolio Platform) | 2025 – Present

Live: [Bells and Whistles Designs | Full-Stack Developer Portfolio](#)

Code Review: <https://github.com/bellsandwhistlesdesigns.github.io>

Designed and deployed a production-ready web platform featuring live API integrations and serverless backend functions

Implemented state-aware UI behavior and personalized navigation flows

Applied API caching and fallback strategies to improve reliability and manage usage limits

Built responsive, mobile-aware components with graceful degradation

Maintain structured GitHub repository with documented technical decisions and clean version control practices

Tech Stack: HTML5, CSS3, JavaScript

(Technical Portfolio Platform) | 2025 – Present

Live: [Douglas James Moth | Technical Project Lead](#)

Code Review: <https://bellsandwhistlesdesigns.github.io/douglas-portfolio>

Designed and deployed a personal technical portfolio web platform

Implemented download button for technical resume

Applied HTML semantics, CSS, and JavaScript achieving Lighthouse scores of 100 in Performance, Accessibility, Best Practices, and SEO.

Built responsive, mobile-aware components

Maintain structured GitHub repository with documented technical decisions and clean version control practices

Tech Stack: HTML5, CSS3, JavaScript

Team Lead Field Operations

PJS Systems | (2020 – 2024)

Led cross-functional teams on large-scale commercial AV infrastructure projects

Managed budgeting, scheduling, blueprint interpretation, contractor coordination, and on-site execution across multiple sites

Directed weekly meetings and supervised installation crews to ensure project milestones were delivered on time and within budget

Configured AV and network systems including structured cabling, switching, and hardware integration

Delivered projects for organizations including TransLink, BC Courthouses, Langara College, RCMP, and The University of British Columbia

Utilized Microsoft Office Suite and Q360 to manage data, reporting, and daily operational management

Owner | Project Manager | Field Operations

Smart Connex Inc. | (2018 – 2020)

Owned and operated a low-voltage data cabling and security installation business serving residential and commercial clients

Managed full project lifecycle including estimating, planning, installation, troubleshooting, and customer communication

Installed structured cabling, configured routers and switches, and deployed multi-camera surveillance systems

Oversaw budgeting, vendor coordination, and workflow management while maintaining strong client satisfaction and repeat business

Utilized Microsoft Office Suite to manage data, reporting, and daily operational management

Grew client base through 80% referral business

Service Coordinator / Systems Administrator

Logic Managed IT | (2015 – 2018)

Coordinated service delivery operations between clients and technical teams in a fast-paced IT environment

Managed scheduling, ticket prioritization, and communication to ensure timely resolution of technical issues

Acted as a bridge between technical staff and non-technical clients

Utilized Microsoft Office Suite and ConnectWise to manage data, reporting, and daily operational management

Field Service Technician

Ledcor Technical Services | (2008 – 2013)

Installed and maintained TELUS home service infrastructure across residential accounts

Scheduled and confirmed customer appointments to ensure timely service delivery

Provisioned and supported POTS, ADSL, and GPON services

Diagnosed and resolved service issues to maintain network reliability and customer satisfaction

Field Service Technician

J-Comm Communications | (2005 – 2008)

Installed and configured (Shaw) now Rogers residential communication services

Coordinated and confirmed service appointments with customers

Completed 5-8 field service calls per day in a high-volume 6-day work week environment

Diagnosed and resolved service issues to maintain network reliability and customer satisfaction

Performed coaxial cable installations and RF signal testing

Order Management Specialist

Xantrex Technologies | (2002 – 2005)

Managed 40+ client accounts, including major customers such as Freightliner and Boeing

Coordinated Return Material Authorization (RMA) processes to ensure efficient product returns and issue resolution

Resolved customer delivery challenges by coordinating with logistics and internal teams

Maintained accurate and detailed documentation for orders, returns, and customer communications

Utilized Microsoft Office Suite to manage data, reporting, and daily operational management

Education

Diploma, Web and Application Development | (2024-2025)

Frontend Development, JavaScript, Responsive Design, Backend Development, Database Systems, UI/UX Design, iOS, Android

Diploma, Network Systems Engineering | (2013-2015)

Network Infrastructure, Systems Administration, Cisco Routing and Switching, Windows Server and Desktop Configurations, Security

Honours Diploma, E-Commerce and Business Management | (2002)

Business Operations, E-Commerce Strategies, Web Based Marketing, Management Principles, Project Coordination, MS Office Suite
